

Fish Habitat Improvement Success

BEFORE

This project site is located on a tributary of the Lower Clearwater River. This photo was taken in 1992 prior to habitat improvement project implementation.

Fish habitat limitations at this site include high stream temperatures, lack of in-stream complexity, low summer flows, inadequate shelter, and sediment in stream.

Photo taken in 2006.
Treatments installed in 1992 and 1993 included fencing, livestock water system, grass seeding, pasture management system, drop structures, and tree planting.
