This project site is located on a tributary of the Lower Clearwater River. This photo was taken in 1992 prior to habitat improvement project implementation.

Habitat limitations at this site include high stream temperatures, lack of in-stream complexity, low summer flows, inadequate shelter, and sediment in stream.

Photo taken in 1995 after installation of habitat improvement projects. Improvements included installation of a livestock water system, grass seeding, fencing, tree planting, log drop structures, habitat rocks, and brush mattresses.

June 2006—SUCCESS!!!
